

ee2go – helping airline mobile platforms *fly*

ee2go, with its fully integratable functionalities, brings all your online booking, check-in, notifications, promotional and loyalty solutions to mobile devices. The entirely customizable solution can be integrated into new or existing 2e Systems platforms in a short amount of time. Tailored for internal and external customers, the responsive design allows for portability to all types of devices. Sitting on top of current host systems the platform requires no change of provider and can be customized according to the required functionalities.

The benefits for managing airline mobility platforms via ee2go

- **eeSky** Suite of solutions are all available as mobile and App versions
- Mobile platforms targeted to passengers, ground staff, inflight and cockpit crew
- Multi-platform approach, each solution can be integrated with any of the 2e platforms
- Can be integrated for one module, or combined across multiple solutions
- Customized solutions that are based on your individual requirements
- Drive promotions such as eVouchers via Passbook or PassWallet applications
- Responsive design, that allows for different device resolutions and dynamic content loading
- Works on top of your current source systems and requires no changes of vendor or supplier
- Dynamic Push Messaging for Apps; if the user is connected to the Internet the system sends the messages to the App; if offline and the App cannot be reached – system rolled back to SMS or E-mail and sends the notification using other channel
- Fully secure method; App interacts with the 2e Systems middleware using lightweight protocol / JSON standard SSL secured Web Services
- Support aspects of Crew Member automation and EFB principles
- One-stop-shop application or platform for any type of customer or staff member

ee2go – helping airline mobile platforms fly

Smartphones, Tablets and other mobile devices are not only revolutionizing but also re-inventing the travel industry. Nearly every passenger is using some type of mobile device, whether it is at the gate, in the air, at baggage claim, everywhere and anywhere. This puts additional pressure on air carriers to not only develop mobile platforms, but also transform how information is delivered, whether it is online, via Social Media, push messaging to Apps, SMS or E-mail message. The key is getting the correct information to the right customer at the right time. At the same time it is crucial for any airline to inform ground staff or inflight crews on irregular operations, when a flight is delayed or cancelled, and provide support to rebook customers on Tablets or other mobile devices.

But when, where and how fast can airlines develop new distribution channels? Time is of the essence, the platforms need to be dynamic and responsive, but also developed quickly, otherwise carriers can easily be left behind. Why re-create the wheel? 2e Systems has designed a solution specifically for air carriers.

ee2go, another platform in the 2e Systems eeSky Suite that places carriers one step ahead of the competition. Together we make your mobile applications fly.

ee2go is a fully customizable solution that allows carriers to choose individual 2e Systems modules and tailor-make Apps or mobile platforms for distribution. Functionalities from various 2e Systems' solutions can easily be integrated. For example combine our dynamic Internet Booking Engine, eeBook, with eeDepart our online check-in platform, or eePromote for online promotions and eeConnect for notifications. The one-stop-shop for passengers. Book, check-in for your flight, receive notifications and get special offers all in one.

But passengers aren't your only customers. Inform Ground Staff about possible flight delays and cancellations. Give them Tablet devices to rebook passengers, complete baggage irregularity reports, or send weight and balance reports via ACARS. In the air or on the ground, inform cockpit and cabin crews about changes to their flight schedule, allow them to check-in for duty, fill out flight reports or check FAR 117 requirements or instant message other crew members. You decide which features are of interest for all your customers, whether your team or the end consumer.

We base our entire methodology around the phase review process for quality management. We work closely with you right from the concept stage, through development till the product is online. This assures the highest quality coupled with fastest development times and lowest costs.
